A word on NFC

Your Seedkeeper card is equipped with dual connectivity: contact (via the chip) and contactless (via NFC).
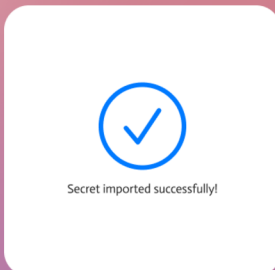

Communication between the card and your smartphone must never be interrupted when you scan your card via NFC.

So it's not enough to simply tap the card on your phone - you have to leave the card in place throughout the scanning process.

The NFC toast tells you when the operation has been successfully completed. You can then remove your card.

Affix your card to your smartphone

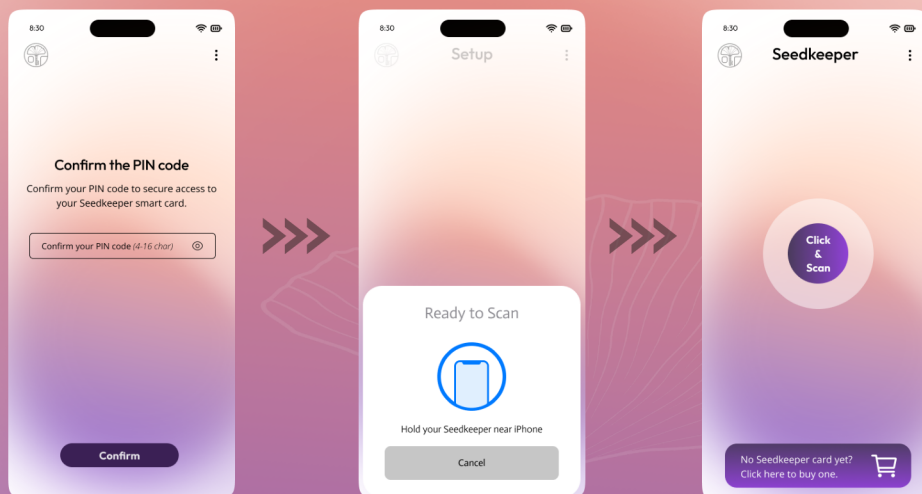

Wait for the complete is complete

On the iPhone, the NFC reader is located on the top of the phone.

First-time use

The very first time you use your Seedkeeper card, you will be asked to define your personal PIN code (from 4 to 16 characters). You'll be asked for it every time you want to access the card's contents.
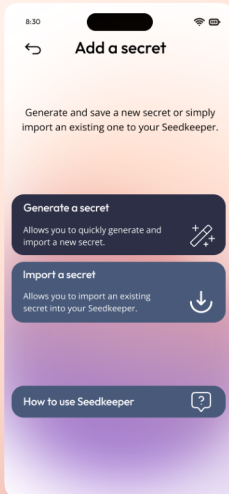

Click on "Click & Scan", enter your PIN and scan your card to confirm the operation.
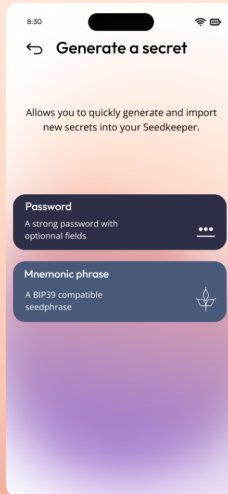

Confirm your PIN, scan your card again and voilà, setup is complete.
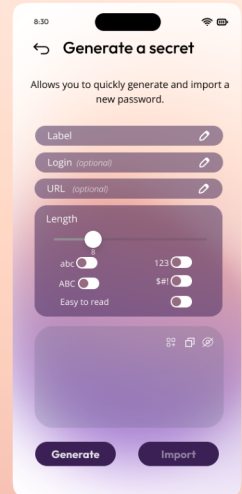

3

Generate strong password

To generate a strong password and save it in your Seedkeeper, click on the ⊕

*Select "Generate a secret".*

Choose "Password".

*Fill in the required fields.*

**Generate** ⟫⟫ **Import**

Scan your card and be sure to leave your card on your phone.
Congratulations, your strong password has been stored in your card.
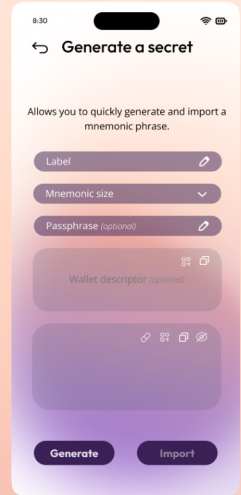

Generate a seedphrase

To generate a seedphrase and save it in your Seedkeeper, click on the ⊕

*Select "Generate a secret".*

Choose "Mnemonic phrase".

*Fill in the required fields.*

**Generate** >>> **Import**

Scan your card and be sure to leave your card on your phone.
Congratulations, your seedphrase has been saved to your card.

Import a secret

You can also import existing secrets into your Seedkeeper's secure memory.

Select "Import a secret". Choose the type of secret you wish to import and fill in the required fields. Then click on "Import".

Scan your card and be sure to leave your card on your phone. Congratulations, your personal secret has been stored on your card.
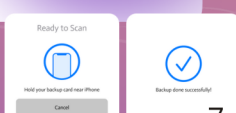

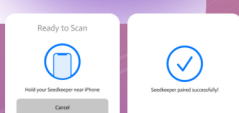

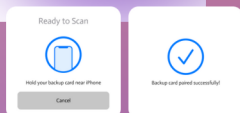

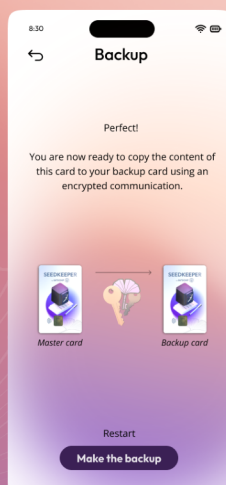

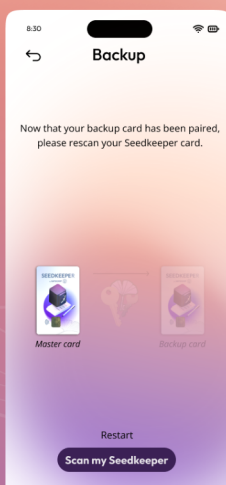

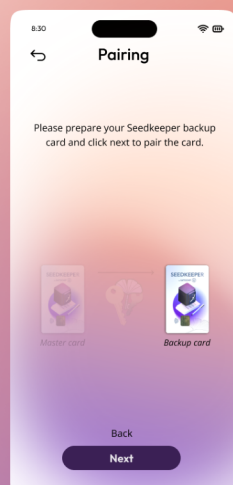

Backup your Seedkeeper

Backup from one Seedkeeper to another is just a few clicks away.

Go to the top-right menu and click on "Make a backup".

The backup process is simple:

1) Scan your backup card to enable the application to identify it.

2) Scan your main Seedkeeper card to prepare the backup.

3) Scan your backup card again to save your backup.

Conclusion

By choosing **Seedkeeper**, you've made the **best decision** for the protection of your sensitive data.

More than just a password manager, **Seedkeeper gives you total control over your digital life.**

Thanks to Seedkeeper, you can now manage your secrets on your own, without ever entrusting them to a third party.

The ultra-secure, **EAL6+-certified** smart card guarantees unrivalled protection against physical attacks. And with its extensive connectivity, you can access your credentials anywhere in the world, with complete peace of mind.

With Seedkeeper, you're choosing excellence and absolute security.
